

Clamp plates

Clamp plates may be used as positive attachment of the belt ends in numerous applications in linear drives. Clamp plates must have the correct belt profile, guarantee a uniform clamping force on all the clamped belt surface and must be rigid. For standard applications a minimum of 7 teeth in clamp is recommended.

For use with timing belts with special cords (e.g. HPL), a minimum of 12 teeth in clamp is recommended, so a special execution is required. Clamp plates can be supplied both in finished version and in raw version too.

Standard material: aluminum.
