## SAFEMAX® Zero Backlash Torque Limiters “GLS/SG/N”

In industrial applications, the increase of automation in the manufacturing processes is becoming a strict requirement; performances are constantly improving and the increase of precision utilizing servo systems results in the increase of higher speeds. Moreover, in order to improve the production capacity it is also important the increase of stiffness of the systems thus the increase of the resistance to global dynamic loads. The torque overload generated by human error, mechanical malfunction or other causes is, however, unpredictable and if not intercepted can damage to the machine and, consequently,

cause downtimes which can be long and, therefore, expensive. SAFEMAX® torque limiters prevent these problems from happening through instant disengagement of the motor side from the driven side in case of torque overload, thus eliminating the risk of expensive downtimes. In addition, our torque limiters, being torsionally rigid and backlash free, allow a rapid and accurate resumption of machine operations once the cause of the overload has been eliminated.

**Note:** It is possible to have aligned keyways upon inquiry.

### Features

- Backlash-free torque transmission
- Low moment of inertia
- Compact design
- Maintenance-free
- Disengagement within 1-3 milliseconds
- Easy and safe adjustment of the torque
- Re-engagement to 360° or in phase

### Applications

- Machine tools
- Packaging machines
- Printing machines
- Textile Machinery
- Industrial Robots
- Cartoning machines
- Woodworking machines
- Automatic equipment

SIT torque limiters are available with regressive springs. When an overload occurs, there is an immediate disengagement of the torque limiter within a few milliseconds, saving the

machine from possible damage. When the overload ends, the torque limiter re-engages after 360° or in optional preset phases.

Graph of spring characteristic curve

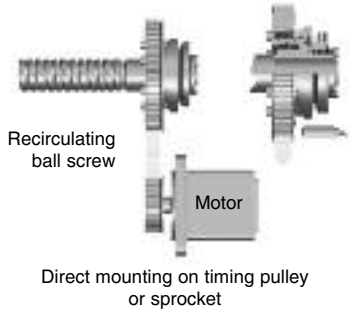

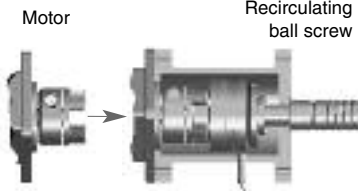

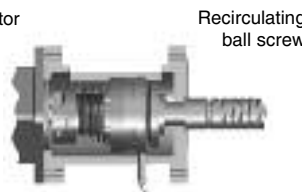

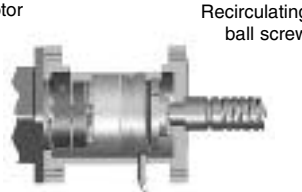

It is possible to govern the torque by the adjusting nut. Unless specifically requested, SIT limiters are designed to operate at 75% of the maximum transmissible torque. In order to allow different settings, there are reference markings on nut and hub. Moreover, there are the markings of the minimum and maximum

torque of the limiter and an indication of the direction of rotation of the nut to increase and decrease the torque of disengagement. Turning the nut clockwise the disengagement torque decreases, turning anticlockwise it increases.

SAFEMAX®

SERVOMATE® Coupling Clamping Hub Transmissible Torque																
Type		Transmissible torque [Nm] related to shaft diameter [mm]														
Torque limiters	Coupling	Ø10	Ø11	Ø12	Ø14	Ø15	Ø16	Ø19	Ø20	Ø22	Ø24	Ø25	Ø28	Ø30	Ø32	Ø35
17	15	20	22	24	28	30	32	38	40	-	-	-	-	-	-	-
20	20	-	-	24	28	30	32	38	40	44	48	50	-	-	-	-
25	25	-	-	-	-	55	59	70	73	81	88	92	103	110	117	128

**Notes:**

The data are related to applications with pilot bore coupling.  
The weights refer only to application with couplings with pilot bore.

## General Information

Company Name  
Address

### Contact Information

First Name	Last Name
Address	
Job Title Phone	Email address

### Requested quantity

### Annual expected quantity

### Application

### Application field

### Type of machine

Where the Torque limiter will be applied and whats to be protected

### Rated torque (Nm)

### Speed (Rpm)

### Work Environment

Clean  
Presence of dust  
Presence of oil  
Humidity%  
Other elements

### Re-engagement position

Equidistant  
360°  
Not important  
Other

### Transmission type

Parallel  
Coaxial

### Motor shaft diameter (mm)

Shaft connection type  
Bore and keyway  
Clamping ring  
Other

### Type of component (Gear, sprocket, ..... Parallel Transmission)

Type of coupling (coaxial Transmission)  
Driven shaft diameter (mm)  
Connection type driven shaft  
Bore and keyway  
Clamping ring  
Other

### Notes

**Please attach application drawing**
